

Frontend Developer (m/w/d)

Change and shape the (working) world of tomorrow with us.

What we offer

If you're looking for more than just a job, want to get involved and work to solve the big problems of our time, then Lemin is the place for you.

Who we are

Lemin is the digital support for companies to prepare culture and workforce for the challenges of the future. We do this by combining practical content, Nobel Prize-winning behavioral and organizational psychology (nudging), and artificial intelligence. In doing so, we enable companies to drive positive change by providing employees with personalized, science-backed coaching moments called "nudges." These nudges help people develop better habits, work smarter and connect with their colleagues. For more joy at work.

Your mission

As a Frontend Developer (f/m/diverse) you are a key player in delivering value with software, delighting our customers and achieving our business goals. Valuing innovation, transparency, quality and pragmatic solutions. You are proud of your work and see it as part of the collaborative achievement to which you contribute to.

Your tasks

- You'll be developing the face of the first touchpoint to our users. Your mission is to bring usability and design at Lemin to life.
- You'll make sure that everyone can use our portal, by making it accessible and responsive.
- Work closely with our Product and Design colleagues to drive state-of-the-art product presentations to scale.
- Be part of a rock-solid team that makes sure that features are fast developed and deployed on production with zero downtime.
- You'll be in constant exchange with your team and participate in regular team meetings (e.g. Code Reviews or Sprint Reviews).
- You will write code with which your peers love to work - make sure it is well written and understandable.

- You will find your balance by being pragmatic and by knowing how not to fall into analysis paralysis.

Must-Haves

- You have at least 2 years of experience using Typescript, Vue and/or Vuex
- You have experience working with git and Github
- You have experience in creating tests with Jest or similar testing frameworks
- Understanding of basic interface design / UX
- You have experience in working with cross-functional teams in an agile environment.
- Humor, passion and the heart in the right place

Nice-To-Have

- Experience in building applications with utility CSS frameworks, such as Tailwindcss
- Experience in building APIs with GraphQL
- Experience in working with Vue 3 and the Composition API
- Experience with end-to-end testing (e.g. Selenium, Nightwatch)
- Knowledge of common best practices and patterns, such as SOLID, KISS, DRY, TDD etc.

Wir freuen uns auf deine Bewerbung an jobs@lemin.digital oder auf www.lemin.digital
